

A B S T R A C T

This invention aims to provide a composite sheet having a layer of inelastically stretchable continuous fibers improved so that a possible unevenness in fiber diameter may be minimized.

A composite sheet comprises an elastically stretchable layer and an inelastically stretchable layer formed with inelastically stretchable continuous fibers bonded to at least one surface of the elastically stretchable layer intermittently in one direction. The continuous fibers are oriented substantially in one direction thereof so that the composite sheet may present a ratio S_1/S_2 of 3.0 or higher where S_1 represents a tensile strength in this one direction and S_2 represents a tensile strength in the direction orthogonal to this one direction.
